25X1

1. There are strong indications that the Kanal Klotnicki (formerly the Adolf Hitler Canal) will be silted up in times of floods or overflows near the Labedy (Laband) locks. This silting is particularly dangerous at the point where the Klotnicka River enters the Kanal Klotnicki because the filters are destroyed at this point. No action has been taken to repair these filters.
2. In the Kanal Klotnicki, numerous barges have difficulty passing under the Labedy Bridge because it is low. This bridge is a minor traffic obstruction in the canal.
